

What Belongs in Each Tab

A content spec for the 9-tab Sales Desk sidebar, written the way a 10+ year sales manager would review a CRM — not "does the screen exist" but "does it actually help me run a sales floor." For each tab: what's already shipped, then what's still missing and why it matters.

Status — Reference/spec document, no code written **Prepared** — 31 Aug 2026

1 Dashboard

ALREADY SHIPPED

Calls Today / New Leads / Meetings / Revenue Closed stat row, a follow-ups-need-attention banner, pipeline stage bars with ₹ value, a monthly-target donut, a Priority Leads table, Team Activity (calls per rep), Today's Schedule.

STILL MISSING, AND WHY IT MATTERS

- **Speed-to-lead.** How long between a lead entering the system and its first call — the single biggest lever on conversion in a cold-calling operation. Nothing shows this today.
- **Stale/stuck leads alert.** Follow-ups only surfaces leads with a `nextCallDate` set. A lead with no next-call date at all never shows up anywhere — this is the most common way real pipeline quietly dies.
- **Weighted pipeline / forecast.** ₹42L of raw pipeline isn't a forecast — a lead in "New" and one in "Proposal" don't have the same odds of closing. Per-stage win-probability weighting turns the total into a number worth reporting upward.
- **Stage-to-stage conversion %.** The pipeline bars show counts, not the drop-off between stages — that drop-off is exactly where a manager finds out where the team is losing deals.
- **Rep quality, not just activity.** "58 calls today" rewards busyness. Win rate and average deal size per rep is what separates productive from busy.

- **At-risk big deals.** A ₹15L deal untouched for 5 days is a bigger fire than a ₹50K one overdue by the same amount — Priority Leads should weight by deal value, not just priority.
- **Trend arrows (WoW / MoM).** "34 new leads" means nothing without knowing if that's up or down from last week.
- **Recent Wins/Losses ticker.** A live feed of what just closed or fell through, keeping attention on outcomes.
- **New business vs. existing-client split.** Are we growing the base or just re-servicing it.

2 Leads (Directory)

ALREADY SHIPPED

Search (company/contact/city), filter by status/priority/rep, card grid with priority + status badges + deal value, view↔edit Lead Profile popup, Excel import, manual Add Lead.

STILL MISSING

- **Bulk actions.** Reassign or bulk-update status for many leads at once — one-at-a-time editing doesn't scale.
- **"Days since last activity" as a sortable column.** A manager scanning for neglected leads needs to sort by staleness directly.
- **Duplicate warning on manual add.** The Excel import already dedupes; manual entry currently doesn't.
- **Export the current filtered view** — e.g. "every Hot lead assigned to Akshay" as a one-click CSV.

3 Daily Calls

ALREADY SHIPPED

Today's worklist (due-today or never-called), sorted priority-first then longest-waiting, one-click "Call Now" into a Log Call action with outcome + comment.

STILL MISSING

→ **Click-to-call.** A tel: link on the mobile number so the call dials from the same screen the outcome gets logged on.

→ **Skip / snooze for later today** — not every lead gets reached first try.

→ **End-of-day summary** — "42 of 50 calls made" against the rep's own daily target, on this same screen.

4 Follow-ups

ALREADY SHIPPED

Overdue and Due Today sections, priority-sorted, live sidebar badge count.

STILL MISSING

→ **"This Week" view**, not just today/overdue — a rep planning their week needs the next 5-7 days visible too.

→ **Inline reschedule** — snoozing shouldn't require opening the full Lead Profile.

→ **Filter by rep**, so a manager can review one person's follow-up discipline at a time.

5 Meetings

ALREADY SHIPPED

Upcoming / Needs-Outcome tabs, sorted by meeting date.

STILL MISSING

→ **A calendar view**, not just a list — meetings are date-anchored, and a week/month grid makes clustering and conflicts visible.

→ **Meeting type** (call / video / in-person) as its own field — prep and no-show risk differ by type.

→ **A pre-meeting checklist/notes template** — so notes aren't a blank box every time.

6 Pipeline

ALREADY SHIPPED

5-stage kanban (New leads → Contacted → Meeting → Proposal → Closure, derived from status), click-to-advance, per-column lead count and total deal value.

STILL MISSING

- **Weighted value per column**, alongside the raw sum — same forecast logic as the Dashboard, shown where deals actually live.
- **Stuck-card highlighting** — a visual flag on cards sitting in-stage longer than a threshold.
- **Filter the board** by rep or priority.
- **True drag-and-drop**, not just a click-to-advance button.

7 Campaigns

ALREADY SHIPPED

Campaign records (name, source tag, target city, sent date), response rate against matching leads, reuses the shipped email-list CSV export.

STILL MISSING

- **Cost and ROI per campaign**. Response rate alone doesn't say whether a campaign was worth running.
- **Campaign status** (Planned / Active / Completed) — right now every campaign is just a logged-and-done record.

8 Reports

ALREADY SHIPPED

Revenue-closed-by-rep bar chart, calls-and-positive-outcomes-by-week line chart (last 12 weeks), Lost-reason breakdown.

STILL MISSING

- **A real date-range picker** — "last 12 weeks" is hardcoded today.
- **A funnel conversion chart** spanning all 5 stages in one view.
- **Source-wise ROI table**, pulled onto Reports itself, not only visible per-campaign.
- **Export the report** — PDF or CSV, for sharing upward.

9 Settings

ALREADY SHIPPED

Monthly revenue target, one daily-call target for the whole team, a read-only rep roster derived from assigned leads.

STILL MISSING

- **Per-rep individual targets** — a senior rep and a new hire don't share a realistic target, and Team Activity's "needs focus" read is only fair against the right number per person.
- **Custom stage/status labels** — renaming "Meeting" to "Site Visit" should be a Settings change, not a code change.
- **Notification preferences** — who gets alerted on a stale lead or overdue high-value deal, once that alerting exists.

§ Priority, If Only a Few Get Built Next

Ranked by how much they'd change a sales manager's actual day-to-day decisions, not by build effort.

- 1 Stale-lead alert** (Dashboard + Leads) — the single biggest blind spot right now.
- 2 Speed-to-lead metric** (Dashboard) — the highest-leverage conversion driver, currently invisible.

3 Weighted pipeline forecast (Dashboard + Pipeline) — turns pipeline value into a number worth reporting.

4 Stage-to-stage conversion % (Dashboard) — shows exactly where deals are being lost.

5 Per-rep targets (Settings) — makes Team Activity's "needs focus" flag actually fair.

Everything else in this document is a real improvement, but these five are what separate a dashboard that looks complete from one that actually changes what a sales manager does each morning.

No code was written or changed in producing this document.
