

IT Department – Real Data Requirement

Fute Services Project Ticket Portal · Prepared for going live from demo/dummy data to real data · 10 Aug 2026

Abhi IT dashboard mein jo bhi data dikh raha hai (tickets, assets, data requests, approvals, rendering status) sab dummy/seed data hai, jo frontend ke andar hi hardcoded hai. Kisi bhi cheez ko real banane ke liye, humein neech di gayi cheezein IT team se chahiye — ya to ek Excel/CSV file mein, ya kisi existing system (Active Directory, Zoho, Freshservice, etc.) se connect karke.

1. Employee aur User Master Data

Yeh sabse pehle chahiye kyunki har ticket, asset aur request kisi employee se hi link hota hai.

Field	Kya chahiye	Kyun
Employee ID	Unique ID har employee ka (jaise EMP-3001)	Ticket aur asset assignment ke liye
Full Name	Actual naam	Ticket requester dikhane ke liye
Department	HR / IT / Sales / Production / Marketing / Branding / Developers	Routing aur reports ke liye
Email + Login	Company email jo login ke liye use hoga	Auth system ke liye
Role	Employee / Coordinator / HR / IT / Founder / Production	Access control ke liye
Reporting Manager	Kisko report karta hai	Approval routing ke liye

2. IT Tickets ka Real Data

Abhi jo tickets hai wo sample hai. Real tickets mein yeh sab fields chahiye:

- Employee ID jisne ticket raise kiya
- Username (system/network login jo issue se related hai)
- VPN No. agar remote access ka issue hai
- Date & Time jab issue report hua
- Issue category jaise Hardware, Software, Network, Access
- Priority Low / Medium / High / Urgent
- Status history kaunsa status kab change hua aur kisne kiya

Suggestion: ek simple Google Form ya Excel sheet bana kar rakh sakte hain jisme naye tickets IT team khud daale, ya phir purane ticket system (agar koi hai jaise Freshdesk/Zoho) se export le sakte hain.

3. Asset Management ka Real Data

Har laptop, desktop, monitor, printer, ya koi bhi IT hardware ka record chahiye:

Field	Detail
Asset ID / Tag Number	Company ka apna asset tag number
Asset Type	Laptop / Desktop / Monitor / Printer / Server / Network device
Assigned To	Kis employee ke paas hai abhi
Hard Disk / Storage	Capacity aur type (SSD/HDD)
Components List	RAM, processor, graphics card jo laga hai
Purchase Date	Warranty track karne ke liye
Status	In Use / In Repair / Retired / Available
Change/Audit Log	Kab kya part change hua, kisne change kiya

4. Data Transfer / Server Request ka Real Data

Abhi jo server list hai (Server 100, 121, 70, 50, 131) wo sample hai. Real mein chahiye:

- Actual server names/IDs jo company use karti hai
- Har server ka real approver (jaise "Server X ka approval kisko jaata hai")
- Priority rule kaunse server pe lagta hai
- Requester ka contact number aur backup person ka naam

5. Approval Workflow ka Real Data

- Kaunse request type ke liye kaunsa approver chahiye (HR Manager, Founder, Department Head)
- Approval categories (jaise Data Access, Server Access, Budget, Hardware Purchase)
- Turnaround time expectation (kitne din mein approve/reject hona chahiye)

6. Production Rendering Status ka Real Data

Yeh Production department se aayega, IT sirf dekhta hai:

- Real project codes jo Production use karti hai
- Render farm ke actual systems ki count aur capacity
- Kaunsa person kaunsa render job handle karta hai (real names)

7. Reports aur Analytics

- Monthly ticket volume, resolved vs pending count (historical data agar available hai)
- Asset inventory ki current total count (departments-wise breakdown)
- Data request approval turnaround (average kitne din lagte hain)

8. Integration Options (agar available ho)

System	Kaam aayega
Active Directory / Google Workspace	Employee master data aur login sync ke liye
Freshservice / Zoho Desk / Jira Service Management	Real ticket history import karne ke liye
Excel / Google Sheet	Sabse simple option, agar koi dedicated system nahi hai

Summary — Sabse Pehle Kya Chahiye

1. Employee master list (naam, ID, department, email)
2. Current open/pending IT tickets ki list (agar kahin maintain ho rahi hai)
3. IT asset inventory list (jo bhi laptops/desktops abhi assigned hain)
4. Server list jinke liye data request aata hai, aur unke actual approvers

Yeh 4 cheezein mil jaye to dummy data ko real data se replace karna shuru kar sakte hain.
